

Dat Le

tuandatle2005@email.com — (714) 396-8999 — www.github.com/DatLe721
www.linkedin.com/in/tuandatle2005/

Education

California State University, Long Beach

Expected May 2027

B.S. in Computer Science

Honors List

GPA: 3.75

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Intro to software developing, Object Oriented Programming, Ethics in computing

Skills

Languages: Python, C++, C, Java, HTML, JavaScript

Tools: Git, Linux, Powershell, NumPy, GQL, Matplotlib, Visual Studio Code, Webpack, React, Pandas, Node, supabase, AWS

Concepts: OOP, Multithreading, Memory Management, Linear Algebra, Data Structures and Algorithms, CRUD, Authentication, Client Server Architecture, RESTful APIs, machine learning

Projects

Alaris — Biomedical AI

October 2025 – Present

<https://www.alarisinnovations.com/>

- Cut weekly sprint meetings from 2 to 1 by redesigning coordination workflow for the 8-person biomedical AI subgroup, maintaining alignment with the broader 20-person team
- Architected an end-to-end data pipeline using Python and Pandas, streamlining the transition from raw web-scraped data to actionable model inputs, and prototyped a logistic regression baseline and trendline-based alert engine
- Created an evaluation wrapper to standardize model I/O and surface explanations (initial "Explainer" for user-facing results)
- Shipped a responsive website in HTML/CSS/JavaScript/Bootstrap and deployed it to **AWS**

PC builds forum

September 2025

https://github.com/DatLe721/final_project

- Built a full-stack forum with 5 core features — post creation, home feed, sortable post views, sortable/interactive comment threads, and edit/delete — using **React** and **Node.js**
- Implemented user authentication, restricting post creation, commenting, and voting to logged-in users
- Designed and integrated a database supporting posts, comments, and upvotes, with sorting available on both post feeds and comment threads
- Developed the project independently, handling frontend, backend, and database design end-to-end

Consent Guardian (Hackathon)

March 2025

<https://github.com/julesiet/consent-guardian>

- Collaborated in a 4-person hackathon team, independently owning 100 percents of backend logic, API design, and AI integration
- Built a Flask backend that processes PDF and image uploads across all common formats (JPEG, PNG, PDF), extracting text via **OCR (Tesseract)** and **PDF parsing**
- Designed an API endpoint to clean and preprocess extracted text before passing it to the **Gemini** API for summarization
- Integrated **Gemini 1.5 Pro** to analyze documents and generate summaries in under 3 seconds, highlighting key points users should look out for

Certifications

- Break Through Tech AI Studio: Completing coursework in machine learning fundamentals, data pipelines, and model evaluation; upcoming mentoring program participant
- CodePath Web Development 101: Foundations of HTML, CSS, and JavaScript to build a responsive web pages.
- CodePath Web Development 102: Applied React and full-stack concepts including APIs, client server interaction, CRUD, database.
